                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to new Moraxella bovis antigens and nucleic acid sequences encoding these antigenic polypeptides. The antigenic polypeptides and polypucleotides are useful for raising an immune response in an animal directed against Moraxella, preferably against M. bovis or M. catarrhalis, and for treating Moraxella infections. The present sequence represents the amino acid sequence of the A subunit of the RTX toxin from M. bovis Dalton 2d.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                         AAW13866 and AAW13867 represent immunogenic chimeric proteins of the invention. This sequence represents a chimeric protein containing the bovine interleukin-2 (II-2) sequence and a leukotoxin sequence. The chimeric proteins of the invention comprise a cytokine, selected from II-2 and gamma interferon (gamma IFN), linked to at least one RTX toxin epitope (preferably the sequence shown in AAW13865). The RTX toxin used to provide the epitope sequence is preferably a leukotoxin, especially the full-length Pasteurella haemolytica leukotoxin. Alternatively, the leukotoxin is a truncated leukotoxin lacking leukotoxic activity, especially LKT352. The chimeric proteins can be used for the production if vaccines against respiratory diseases such as pneumonia, particularly fibrinous pneumonia caused by P.haemolytica, including shipping fever in

Pasteurella species, especially Pasteurella haemolytica, are responsible for respiratory diseases in a range of agricultural animals, most particularly cattle, but also sheep, pigs, horses and fowl. Shipping fever is the most economically important respiratory disease associated with Pasteurella species, affecting 15-30% of exposed cattle and resulting in a 2-5% mortality rate in the exposed population. The vaccine composition of the invention is is useful for preventing or ameliorating respiratory diseases such as pneumonia, particularly shipping fever pneumonia, in livestock. The present sequence represents a fusion protein comprising bovine interleukin-2 (II-2) and Pasteurella haemolytica leukotoxin, which may also be useful for a pasteurella haemolytica leukotoxin, which may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-DEC-1993;

IL-2-IKT was gel purified and ligated into the expression vector pGH433 lacI. The resulting clone pAA356 (ATCC 68386) contd. the desired gene fusion under the gene fusion is useful in a vaccine compsn. with a pharmaceutically acceptable vehicle, e.g. a carrier homologous to a rotavirus VP6 inner capsid protein. The vaccine can be used for preventing or inner capsid protein. The vaccine can be used for preventing or inner capsid protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 1992-096901/12.

                                                                                          One or more biologically pure antigenic determinants of the leukotoxin protein comprising of at least six amino acids is a component of a new vaccine for animals. The vaccine elicits an enhanced immune response after challenge with Pasteurella haemolytica. The vaccines other component is a bacterial free culture supernatant derived from a culture of Pasteurella

                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a fusion between bovine interleukin-2 (IL2) and Pasteurella haemolytica leukotoxin (LTR). The leukotoxin gene, ltkA, was isolated from a gene library of P. haemolytica by chromosome walking. Immunogenic fusion proteins such as this can be used in vaccine compositions. It can also be used to raise mono-

                                                                                                               The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lktA coded for by plasmid pAA352. The hmb gene fragment was taken from pRAP504 and starts at the codon for the 33 rd amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic
